

Enermodal Edmonton Opens for Business

Enermodal Engineering, Canada's largest green building consultant, recently opened an office in Edmonton to further serve the expanding Alberta green building market. With existing offices in Kitchener, Calgary, Denver, and Toronto, Enermodal is responsible for 45% of all LEED Canada certifications.

"Although we have worked on projects in Edmonton in the past, we are excited to bring full-service green building consulting permanently to this city," says Brian Pescod, Business Development Coordinator for Enermodal Edmonton. Enermodal has worked on sustainable projects in the past, most recently the LEED-ND (Leadership in Energy and Environmental Design-Neighbourhood Development) Silver certified Strathearn Heights. Strathearn Heights is designed as a walkable, diverse, dense, green community.

"The fact that we now have two offices in Alberta shows the expansion of the green building market in the province," says Mr. Pescod, LEED AP (Accredited Professional).

Enermodal is the only firm in the country to offer the full spectrum of green building consulting services, including LEED consulting, energy efficiency engineering, commissioning, building performance monitoring, window rating, green building education program development, and mechanical/electrical design.

Enermodal Engineering is the largest consulting firm in Canada exclusively committed to creating buildings and communities that are energy and resource efficient. With a professional staff in Kitchener, Calgary, Edmonton, Denver, and Toronto, Enermodal is working on over 250 buildings pursuing LEED across North America and is responsible for over 45% of LEED Canada certifications.
