Enermodal Government Buildings: Leading green by example

The Enermodal Philosophy

As the public becomes more aware of the energy and resource waste associated with conventional buildings, government is leading the way with increasingly sustainable buildings.

Enermodal has worked with every level of government – national to municipal – to create efficient, effective, and inspiring buildings.

Featured Projects

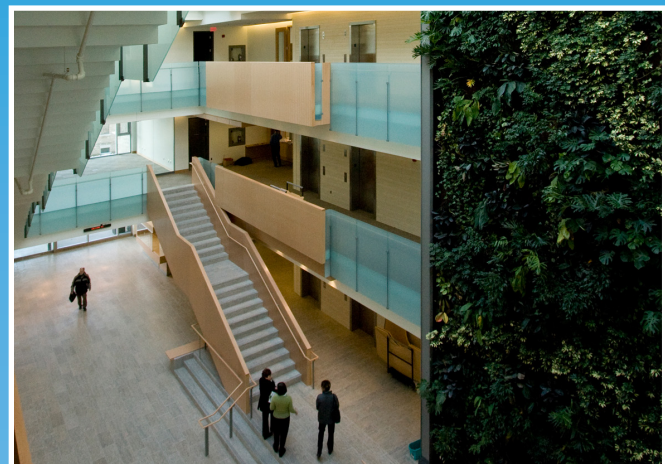

Cambridge City Hall (Cambridge, Ontario) – This building extension received the highest LEED rating (Gold) of any city hall in the country, with Enermodal providing LEED, energy efficiency, green education program, and commissioning consulting. The design provides outdoor views for 95% of building occupants and includes a central atrium with a striking four-storey living wall to allow stack ventilation.

Ministry of the Environment Office (Toronto, Ontario) – This LEED-CI Platinum candidate involves the retro-fit of two floors in the Ferguson Block at Queen’s Park. The project is targeting a 35% lighting power density reduction below ASHRAE standards.

Aylmer Ministry of Natural Resources (Aylmer, Ontario) – A LEED Silver certified office facility was the perfect fit for the ministry work in wise resource management. A rainwater cistern supplies water for toilet flushing, while waterless urinals provide additional water savings.
