Enermodal Municipal Services: Delivering green infrastructure

The Enermodal Philosophy

Very few organizations understand the importance of minimizing energy and water use better than municipal services. Municipal services, responsible for water treatment, understand that our potable water consumption can be decreased, thus diminishing our impact on the environment and community infrastructure.

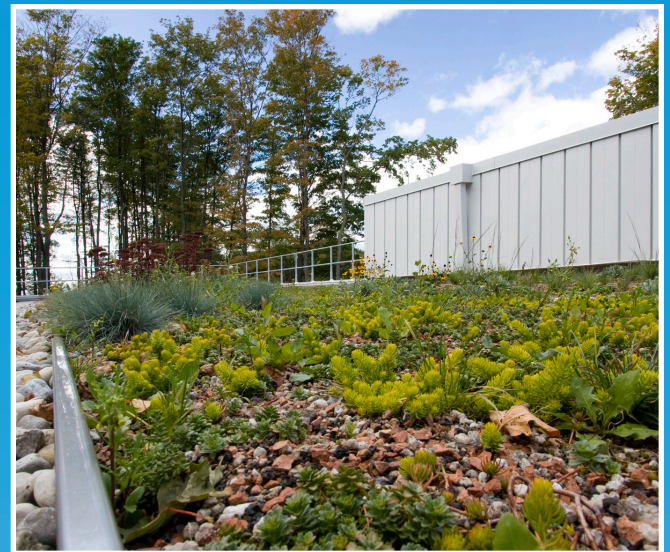

Enermodal is currently working on several municipal service facilities looking to go green. If communities are to become more sustainable, it is up to local government to lead the way.

Featured Projects

Walkerton Clean Water Centre (Walkerton, Ontario) – A LEED Gold candidate, this water treatment centre minimizes its water use through native-species landscaping (requiring no irrigation) and a shared hybrid vehicle.

Waterloo Landfill South Workshop (Kitchener, Ontario) – This LEED Silver candidate municipal facility includes administrative space and vehicle workbays.

Stouffville Pumping Station (Stouffville, Ontario) – An onsite PV system, habitat restoration, and a targeted 31% energy savings highlight this LEED project.

Mannheim Water Treatment Plant (Mannheim, Ontario);
LEED Silver candidate

Walkerton Clean Water Centre (Walkerton, Ontario);
LEED Gold candidate
