Enermodal Museums/Galleries: Artistic green

The Enermodal Philosophy

Art galleries and museums have specific temperature, humidity, and lighting requirements that must be balanced with green principles of energy efficiency – not to mention an eye-catching exterior.

Enermodal understands that the preservation of the natural environment can be aligned with the preservation of works of art, because a building integrated seamlessly with its natural environment can certainly be a work of art onto itself.

Featured Projects

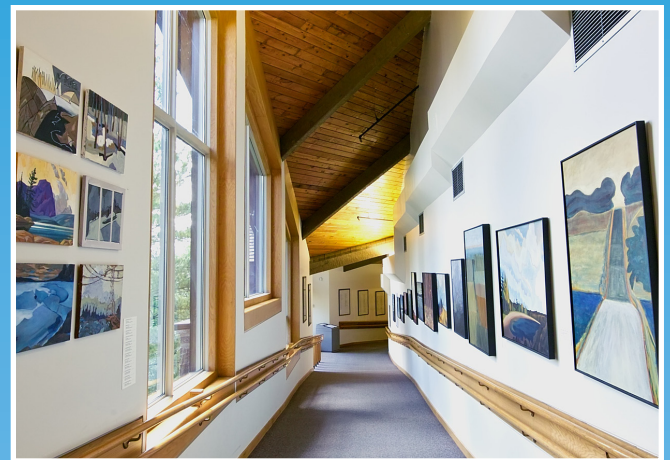

Museum of Human Rights (Winnipeg, Manitoba) – This international learning centre engages visitors to act against hate and oppression. A unique architectural design combines with superior indoor air quality to promote human health and environmental sustainability.

McMichael Canadian Art Collection (Kleinburg, Ontario) – The first institutional LEED Canada EB:O&M certified building, this art collection features the works of the Group of 7 and other Canadian artists.

Montrose Cultural Centre (Grande Prairie, Alberta) – This LEED Silver candidate art gallery and cultural centre includes ventilation heat recovery and automated lighting.
